Forecast Discussion:

A true mid-summer's day is expected today, with the chance of strong to severe thunderstorms this afternoon. The morning is expected to start off sunny and warm with calm winds.

Temperatures will warm into the 80's during the late morning, and into the 90's after noon.

Increasing clouds in the early afternoon will be a sign of increasing moisture. The atmosphere will be becoming more unstable and a front will approach during the mid afternoon hours.

Storms will develop from west to east, most likely between 4pm and 6pm.

Some of these storms may produce gusty winds and hail as they move eastward. They are expected to shift away from the region by sunset. Cooler air will move in behind them for the overnight period with clearing skies expected.

Forecast Issued: 7:00pm 6/5/2016 | **Forecaster:** Homenuk
